ILLUMINATE with CLIPSO

Lighting is essential to admiring beauty as it creates ambiance and enhances the mood of a space. CLIPSO® offers solutions to incorporate lighting into your ceiling and wall projects. Create a distinct design element with our translucent fabrics, which are available in three levels of translucency: 30%, 50% and 70%. Or incorporate excellent acoustic properties into your design with our Acoustic Translucent coverings. All variations can be custom printed as well. Adding a light source behind the fabric creates a distinct design element perfect for small or large-scale applications.

CLIPSO offers two 12-volt options for illuminating your project: Luminous Surface Lighting and LED Perimeter Lighting. Each has specific qualities that suit them to particular designs and constructions. A CLIPSO project manager can help select the appropriate lighting method according to your project needs.

LUMINOUS SURFACE LIGHTING

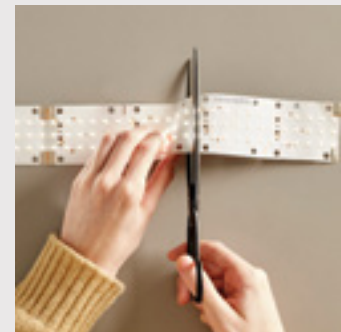

TILE Lighting

CLED-90

LINE Lighting

CLED-72

- Ability to light any architectural surface including planes, bends and coves
- Delivers a uniform, quality light over large scale installations
- Provides top energy efficiency through low power consumption and minimum heat generation

- Flicker-free dimming and tunable white control
- 12"x12" TILES can be cut, sized and shaped to accommodate common site obstacles
- Constant voltage design powers up to 50 square feet with complete uniformity
- Ideally suited for tight spaces with low set-back to 2" (50 mm)

LED PERIMETER LIGHTING

- Lighting is contained inside the frame
- Provides an even light flow of up to 16'
- Light modules specifically designed with a 10° light spread
- Clean and uniform look
- Customizable frame configurations
- Makes relocating easy
- Lower material cost
- Lower installation cost
- Long lasting lamps
