The next generation
of ceilings and walls!

Project of the Month

CLIPSO Reaches New Heights at Ariel Corporation!

AEROCEILING clouds, corporate auditorium, Ariel Corporation, Mt. Vernon, Ohio.
Installer: Ketchum & Walton Co.

When the client first came to CLIPSO, they were initially unsure of a concept and wanted a few ideas for their 2,500 square foot auditorium ceiling. After discussing options with our Project Manager they decided on 32 acoustic frames which would stagger for a more three-dimensional appearance. In order to make this project more manageable onsite, the installer, Ketchum & Walton Co., chose to order the frames pre-assembled as AEROCEILING frames.

The color fabric selected for the coverings was 4031 Seafoam. The CAC 140 profiles were custom painted to match the coverings. They were then custom bent, digitally cut, kitted and shipped from our facility in France to the US Headquarters in New York. Our facility in France also created individual templates for each frame to use as guides for assembly in the US. The frames were then assembled in the New York facility and reinforced using RA04 reinforcements. After they were received on site in Ohio, the installation team from Ketchum & Walton Co. installed two layers LA 53 acoustical batting and the acoustic fabric to complete the look.

In addition to the AEROCEILING frames installed in the auditorium, Ketchum and Walton Co. also installed 570 linear feet in the walls, and 328 linear feet in the ceiling of the buildings main corridor. This was done using acoustic 495 D coverings in 4031 Seafoam along with LA 53 acoustic batting. Due to its lightweight materials and ease of installation, CLIPSO coverings were an obvious choice to be installed at such high heights above the finished floor.

Congratulations to the installation team at Ketchum & Walton Co. This project was installed impeccably and the final product is absolutely breathtaking!
